

# THOMPSON ENAMELS

Thompson Enamels are lead-free glass products available in various particle sizes and formulated to fit a variety of glass products. Enamels are available in 2 oz and 8 oz jars. 83 COE is for float glass. Powder sifters and dichroic float glass also available. We also carry Thompson Enamels for Bullseye 90, Uroboros 90, and Effetre 104 glass. Mesh size 80 is standard. 80-200 mesh, and 325 + MESH are available by special order. Firing Ranges: 83 COE 1250-1300F for normal firing. 90 COE 1450F for normal firing. While the enamels are acid resistant and lead-free, their final food safe properties depend on firing characteristics and are therefore not recommended for food surfaces. To order 2oz or 8oz jars, add "-02" or "-08" to end of code.

**THOMPSON ENAMEL GLASS PAINTS**

These strongly pigmented; fine ground enamel colors can be used on float glass, 400 series stainless steel with or without an overcoat of transparent enamel. The eight colors can be mixed and intermixed like paint to create many different colors. The colors can be applied with a brush or sprayed on. Can be mixed with either oil or water based medium. Gives a much THINNER layer of color than enamel. Also gives a less brilliant color when used by itself. To intensify the color, layer over white.
